

Tom Hyde specializes in new construction and renovation, and brings a deep experience in master planning and design, energy analysis and sustainable design, code conformance, ADA compliance, and all phases of asbestos consultation.

Prior to joining Graham & Hyde in 1974, Tom served three years as a project designer and architect with other central Illinois architectural firms, engaged in the planning and design of educational facilities, religious structures, hotels, restaurants, commercial facilities, housing, and office buildings.

He was elected to the positions of principal and director of Graham & Hyde Architects in 1981 and today brings his passions for new construction and renovation, master planning and design, energy analysis and sustainable design, code conformance, ADA and asbestos compliance to educational and religious projects in particular.

Tom is a native of Beardstown, Illinois. He and his wife Janis have six children and seven grandchildren, scattered across the central states. In his free time, he enjoys water color painting, golfing, fly-fishing, gardening, and traveling, being particularly partial to Paris.
